From the Commissioner

As a parent of four myself, I want understandable information that helps me support my children in class and at home. This report gives you details on how well your child learned this year's academic material in school and guidance on how you can help your child even more at home. The results you see also allow you to know if your child is on track and gaining the grade-level knowledge to be ready for college, a career, or the military.

The STAAR tests have been redesigned with the input of many Texas teachers to look more like how your child learns in the classroom and to emphasize writing. As a parent, you have a right to see your child's STAAR results, including every question that was scored and how your child answered it. I invite you to review these results and learn more.

Mike Morath, Commissioner of Education

What the Results Mean

This report shows how well your child did on STAAR. There are four levels of performance.

**MASTERS
GRADE LEVEL**

Mastery of course knowledge and skills is shown—student is on track for college and career readiness.

**MEETS
GRADE LEVEL**

Strong knowledge of course content is shown—student is prepared to progress to the next grade.

**APPROACHES
GRADE LEVEL**

Some knowledge of course content is shown but may be missing critical elements—student needs additional support in the coming year.

**DID NOT MEET
GRADE LEVEL**

No basic understanding of course expectations is shown—student may need significant support in the coming year.

Maximize Time During Parent Teacher Conferences

Sample questions to ask the teacher:

- What do you see as my child's strengths?
- What does my child seem to be most interested in at school?
- Does my child get along well with his or her classmates?
- What is the most important thing that I can be doing to prepare my child for high school?
- Is my child giving his or her best effort?
- What could my child be doing that he or she is not already doing?
- What do you think are the biggest challenges for my child, and how can I help him or her with those challenges?

Performance: 7th Grade

RESOURCES TAILORED FOR ABHIRAJ

Reading Language Arts

Strategies to improve your child's grade 7 reading language arts understanding

Reading

- Have your child read news articles about the same event from several different sources. Discuss how they are presented differently and why that might be.
- Ask your child to set specific goals related to reading fiction. An example might be to read a specific number of challenging eighth-grade level books or to learn a number of new vocabulary words. Have your child write down his or her goal and track his or her progress.

Writing

- Ask your child to identify a local issue that he or she would like to address, such as road conditions, lack of access to public transportation, or water quality. Have him or her write a letter to a representative from the local government. Tell your child to write in a formal tone and to include at least three examples supporting his or her position.
- Ask your child to write a description of his or her dream home or bedroom. Have him or her write a few paragraphs describing the reasons behind the design decisions. Make sure he or she includes language that appeals to the senses.

Mathematics

Strategies to improve your child's grade 7 math understanding

Probability and Numerical Representations

- Have your child draw an item from a bag of objects with different colors, such as marbles or candies. Have him or her replace the item and draw another item from the bag and then draw a tree diagram for all the possible outcomes of this activity.
- Using a bag of objects with different colors, have your child find the complement to finding a certain outcome, such as drawing a red item, from the bag of objects.

Computations and Algebraic Relationships

- Have your child multiply or divide fractions and decimals found in everyday life, such as measurements in a recipe or building dimensions.
- Give your child a rate of change, such as a certain speed, and have him or her create a graph of the situation with the rate given different variables.

Geometry and Measurement

- Have your child measure the radius or diameter of a circular object and find the circumference or area.
- Have your child measure the length of an object in centimeters and then convert the measurement into inches (1 in. is approximately 2.54 cm.).

Data Analysis and Personal Financial Literacy

- Find the price of an everyday item and the local sales tax rate and have your child determine the amount of sales tax they would pay for the item.
- Have your child create two dot plots using data collected from related surveys, such as the amount of screen time classmates are allowed on weekdays and weekends. Have them compare the shapes, centers and spreads of the dot plots.

Here are some books that are within ABHIRAJ's reading complexity range as measured by Lexile. Depending on ABHIRAJ's interest and what you determine is appropriate for your family, these may be good options to encourage your child to read more.
